

SGP INTERNATIONAL, INC.

SYSTEMS FOR INFORMATION MANAGEMENT

Consulting Solutions

SGP is proud to include a variety of businesses in our client base. From large international banks to small local businesses, SGP professionals provide individualized solutions to a variety of business needs. SGP solutions combine technical expertise with business sense.

REDS - Real Estate Deals System

REDS was implemented at PB Capital for the internal management of their corporate and real estate portfolios. Deals are tracked from approval through expiration. Multi-faceted tickler systems and on-demand reporting allows for portfolio management in a fluid environment. The system's modular approach allows the user to purchase only the features required.

DOX - Document Compliance System

DOX tracks a group of documents and maintains the current and historical status of all documents within the system. DOX tracks past due documents and serves as a tickler system for upcoming document requirements. Users can link directly to the document image for immediate viewing. DOX Document Compliance System will assist any financial organization in providing a comprehensive view of all document requirements.

Forecast

The Forecast system, created for Warnaco and Maidenform, provides a rolling 12 month forecast based on any statistical model. The system provides the user with the flexibility to assign an annualized increase by customer or by product line, along with the ability to assign overrides down to the SKU level.

Clark Transfer - Sales And Dispatch

Since 1949, Clark Transfer has moved thousands of productions over millions of miles. They have handled the transportation of Broadway shows, dance companies, operas, orchestras, televised events, and trade publications. SGP International developed a customized Sales and Dispatch System for Clark Transfer to track all stages of a show's move, from initial bidding to driver payment vouchers. The system provided links to the company's accounting software and other third party software systems used in the trucking industry.

NYU - Planning and Construction

New York University has more than 500 ongoing projects in various stages of development. From proposals and bid, through code enforcement, completion and invoice, the Planning and Construction System tracks the budget, commitment and actual results by project, expeditor, category and site. By using the Planning and Construction System NYU was able to improve efficiency and gain tighter control of their construction projects.
